

How to Use

Do not mix Enzyme Wizard Bathroom / Toilet Cleaner with any bleach, oxidisers, or other chemicals as this will de-activate the enzymes.

It is recommended that when starting to use Enzyme Wizard Bathroom / Toilet Cleaner, new micro fibre cloths, toilet brushes, or other equipment should be used. This is because any residual soap, or chemicals will adversely impact the effectiveness of the enzymes.

For general cleaning, dilute Enzyme Wizard Bathroom / Toilet Cleaner at a ratio of 10:1. Spray the surface to be cleaned and wipe, preferably with a clean micro fibre cloth.

For sanitary ware with an excess build-up of stain or limescale spray the surface with undiluted Bathroom / Toilet Cleaner and use a toilet brush and scrub down the surface. Do not flush. Allow the surface to air dry slowly in order to give the enzymes longer to work.

For badly soiled tiles, spray the solution on to the affected surface and then scrub with a soft brush. It is important not to use a hard brush as the bristles of a hard brush will not be able to get down into the grouting which will be lower than the surface of the tile.
