

How to Use

Do not mix Enzyme Wizard No-Rinse Floor Cleaner with other chemicals as this will deactivate the enzymes.

Ensure that when changing over to Enzyme Wizard No-Rinse Floor Cleaner from your regular chemical cleaner, use a new mop and bucket to avoid streaking. For best results, use a flat head micro fibre mop.

When mixing the concentrate into a bucket it is important to use the correct ratio of 100:1. Dilute the product easily by using the measure guide on the side of the one litre twin bottle. Pour 10ml into 10 litres of warm, or cold water (if half filling a 10L bucket, use 50ml).

Wet the mop head in the bucket as normal and when squeezing out the mop head, leave the mop wet.

Mop the floor as you would normally, leaving a thin layer of solution as this will allow the enzymes to continue to work at their best. Allow the floor surface to dry naturally. Do not mop dry.

When using externally, on heavily soiled surfaces, a high-pressure washer can be used first. The enzymes in the floor cleaner work over time and so results will occur after a day or two with just mopping the floor.

After mopping, rinse the mop and stand it upright in a cupboard. Enzymes will carry on working and will stop the mop from smelling.
