

# How to Use

Do not mix Enzyme Wizard Oven & Cooktop Cleaner with any bleach, oxidisers, or other chemicals as this will de-activate the enzymes.

Ensure the appliance to be cleaned is cool.

**For areas with a light build-up** of fats, oils and greases, spray the surface liberally with Enzyme Wizard Oven & Cooktop Cleaner and leave for 10 – 15 minutes to allow time for the enzymes to work. Use a non-scratch pad to remove heavy residue. After cleaning, rinse the surface with water and wipe with a micro fibre cloth to remove excess product.

**For heavily soiled surfaces**, spray the Oven & Cooktop Cleaner liberally on to the affected surface and then leave for 60 – 120 minutes. As this is a natural cleaning method, the enzymes in the product need time to break down and destroy the organic matter. The older and more baked on the fat, the longer the dwell time. Use a non-scratch pad to remove heavy residue. In some cases, severely carbonised fat will not be able to be removed.
