

How to Use

Do not mix Enzyme Wizard Wheelie Bin Cleaner & Deoderiser with any bleach, oxidisers, or other chemicals as this will de-activate the enzymes.

Shake well and spray liberally on to areas to be treated. Use a stiff brush and scrub the surface to assist with the breakdown of grime. Leave the surface to air dry slowly in order to give the enzymes longer to work.

For wheelie bins and outside areas, leave for at least 5 minutes. The enzyme solution should have softened the grime sufficiently to enable hosing, or washing down with clean water to remove debris.

To maintain odour elimination, spray again after hosing down.
